

SCREENSHOT UTILS

How to Use

Once you got the Asset, there are 2 ways you can take screenshots.

- First way is to click on Screenshot Menu Items

(Pro Tip) You can also use *Alt + Insert* to take the screenshot

- Second is through code by calling `Screenshot.CaptureScreenshot()`

(Pro Tip) You can also specify a path to save the file in the parameters. For

```
private void OnCollisionEnter2D(Collision2D collision)
{
    Screenshot.CaptureScreenshot("Assets/RandomFold/Hahah");
}
```

Eg

Here whenever player collides with an object, I am saving a screenshot in a custom folder defined by me.
